Transaction Date: 10/17/2024 12:24 pm

Platinum Price per Ounce: 998.40

Merck Share Price: 110.46

Asset Overview and Acquisition

Khalid Zegmou has successfully acquired two promising assets: Platinum and Merck stock, each at a \$12,500 worth. This diversification provides exposure to both the precious metals market and the healthcare and pharmaceutical sectors.

- Platinum is a rare and valuable metal, used in industries such as automotive manufacturing (for catalytic converters), electronics, and jewelry. As industries move towards green energy, platinum’s demand is likely to increase due to its essential role in hydrogen fuel cells.
- Merck is one of the leading global pharmaceutical companies, known for its strong portfolio of vaccines, cancer treatments, and other life-saving medications. The company’s consistent innovation in healthcare makes it a stable investment for the long term.

Potential for Growth: Platinum

Platinum has demonstrated resilience as both a commodity and an investment. Despite occasional volatility in the global metals market, platinum is considered undervalued compared to gold and other precious metals. As industrial demand increases, especially in clean energy technologies like hydrogen fuel cells, platinum prices could rise significantly over the coming years. Additionally, limited global mining operations suggest that supply constraints could further boost its price, making it a smart choice for long-term wealth preservation and potential appreciation.

Potential for Growth: Merck (MRK)

Merck continues to be a major player in the pharmaceutical sector, with a strong track record of growth and product development. As the world moves towards post-pandemic recovery, Merck’s advanced cancer therapies and vaccines are expected to see increased demand. Furthermore, the company’s significant investment in research and development (R&D) ensures that it remains competitive in developing new treatments for major global health concerns. Given its position in an ever-evolving industry, Merck offers solid growth potential with the added benefit of stable dividends.

Conclusion

Khalid Zegmou’s investment in both platinum and Merck positions him to benefit from key industries that are poised for growth. As global markets evolve, these assets provide a balanced portfolio, combining the potential for high returns from an industrial commodity with the stability and innovation of a leading pharmaceutical firm.
